3.) Installing Docker

- connect via ssh to your pi

- type in:

```
sudo apt update
```

- type in:

```
sudo apt upgrade
```

- type in:

```
curl -sSL https://get.docker.com | sh
```

- type in:

```
sudo usermod -aG docker pi
```

- type in:

```
sudo apt-get install -y libffi-dev libssl-dev
```

- type in:

```
sudo apt-get install -y python3 python3-pip
```

- type in:

```
sudo apt-get remove python-configparser
```

- type in:

```
sudo pip3 -v install docker-compose
```

I create a main directory for all my docker container config files and appdata.
In my case it is /media/dockerdata

NCPdockerdata.PNG

- type in:

```
sudo mkdir /media/dockerdata
```
